the thesis of this book is that williams played a key role in the development and revival of
analytic metaphysics this book begins with an account of williams approach to philosophy
given the rise of realism in the early twentieth century with a focus on his use of induction
and parsimony to argue for metaphysical theses such as metaphysical realism and
metaphysical naturalism it explains his critique of logical positivism and his defence of an
empirical conception of metaphysics which in turn reveals how he took himself to be standing
up to rising anti metaphysical trends this book then expounds within the framework of his
empirical metaphysics his one category trope ontology and its origins arguing that his
systematisation of the concept of an abstract particular or trope is his most novel contribution
to analytic ontology this book further presents an original interpretation of his account of
concrete objects and abstract universals engaging with current debates in the metaphysics of
properties sometimes defending williams sometimes correcting misinterpretations sometimes
critically reassessing his views this book also explains his defence of the four dimensional
manifold of time and his objections to competing theories such as the growing block theory
and presentism incorporating recently posthumously published work in the elements and
patterns of being ed a r j fisher 2018 with up to date references to the latest work in the
metaphysics of time lastly this book analyses williams s influence on later philosophers such as
lewis and armstrong and others in australia drawing from correspondence between williams
lewis and armstrong and evaluates his place in the history of analytic philosophy concluding
that he played a key role in the development and revival of analytic metaphysics

the burgeoning field of social neuroscience has begun to illuminate the complex biological bases of human social cognitive abilities however in spite of being based on the premise of investigating the neural bases of interacting minds the majority of studies have focused on studying brains in isolation using paradigms that investigate offline social cognition i e social cognition from a detached observer s point of view asking study participants to read out the mental states of others without being engaged in interaction with them consequently the neural correlates of real time social interaction have remained elusive and may paradoxically represent the dark matter of social neuroscience more recently a growing number of researchers have begun to study online social cognition i e social cognition from a participant s point of view based on the assumption that there is something fundamentally different when we are actively engaged with others in real time social interaction as compared to when we merely observe them whereas for offline social cognition interaction and feedback are merely a way of gathering data about the other person that feeds into processing algorithms inside the agent it has been proposed that in online social cognition the knowledge of the other at least in part resides in the interaction dynamics between the agents furthermore being a participant in an ongoing interaction may entail a commitment toward being responsive created by important differences in the motivational foundations of online and offline social cognition in order to promote the development of the neuroscientific investigation of online social cognition this frontiers research topic aims at bringing together contributions from researchers in social neuroscience and related fields whose work involves the study of at least two individuals and sometimes two brains rather than single individuals and brains responding to a social context specifically this research topic will adopt an interdisciplinary perspective on what it is that separates online from offline social cognition and the putative differences in the recruitment of underlying processes and mechanisms here an important focal point will be to address the various roles of social interaction in contributing to and at times constituting our awareness of other minds for this research topic we therefore solicit reviews original research articles opinion and method papers which address the

investigation of social interaction and go beyond traditional concepts and ways of experimentation in doing so while focusing on work in the neurosciences this research topic also welcomes contributions in the form of behavioral studies psychophysiological investigations methodological innovations computational approaches developmental and patient studies by focusing on cutting edge research in social neuroscience and related fields this frontiers research topic will create new insights concerning the neurobiology of social interaction and holds the promise of helping social neuroscience to really go social
